ABSORBERS & Strips

Strips

The DIMAS Company offers many solutions for construction companies and engineers who want to design and synthesize their own solar project. Aluminium and copper pipe welded with **LASER*** technology. Selective surface with high absorbency and simultaneously low cost.

www.dimas-solar.gr

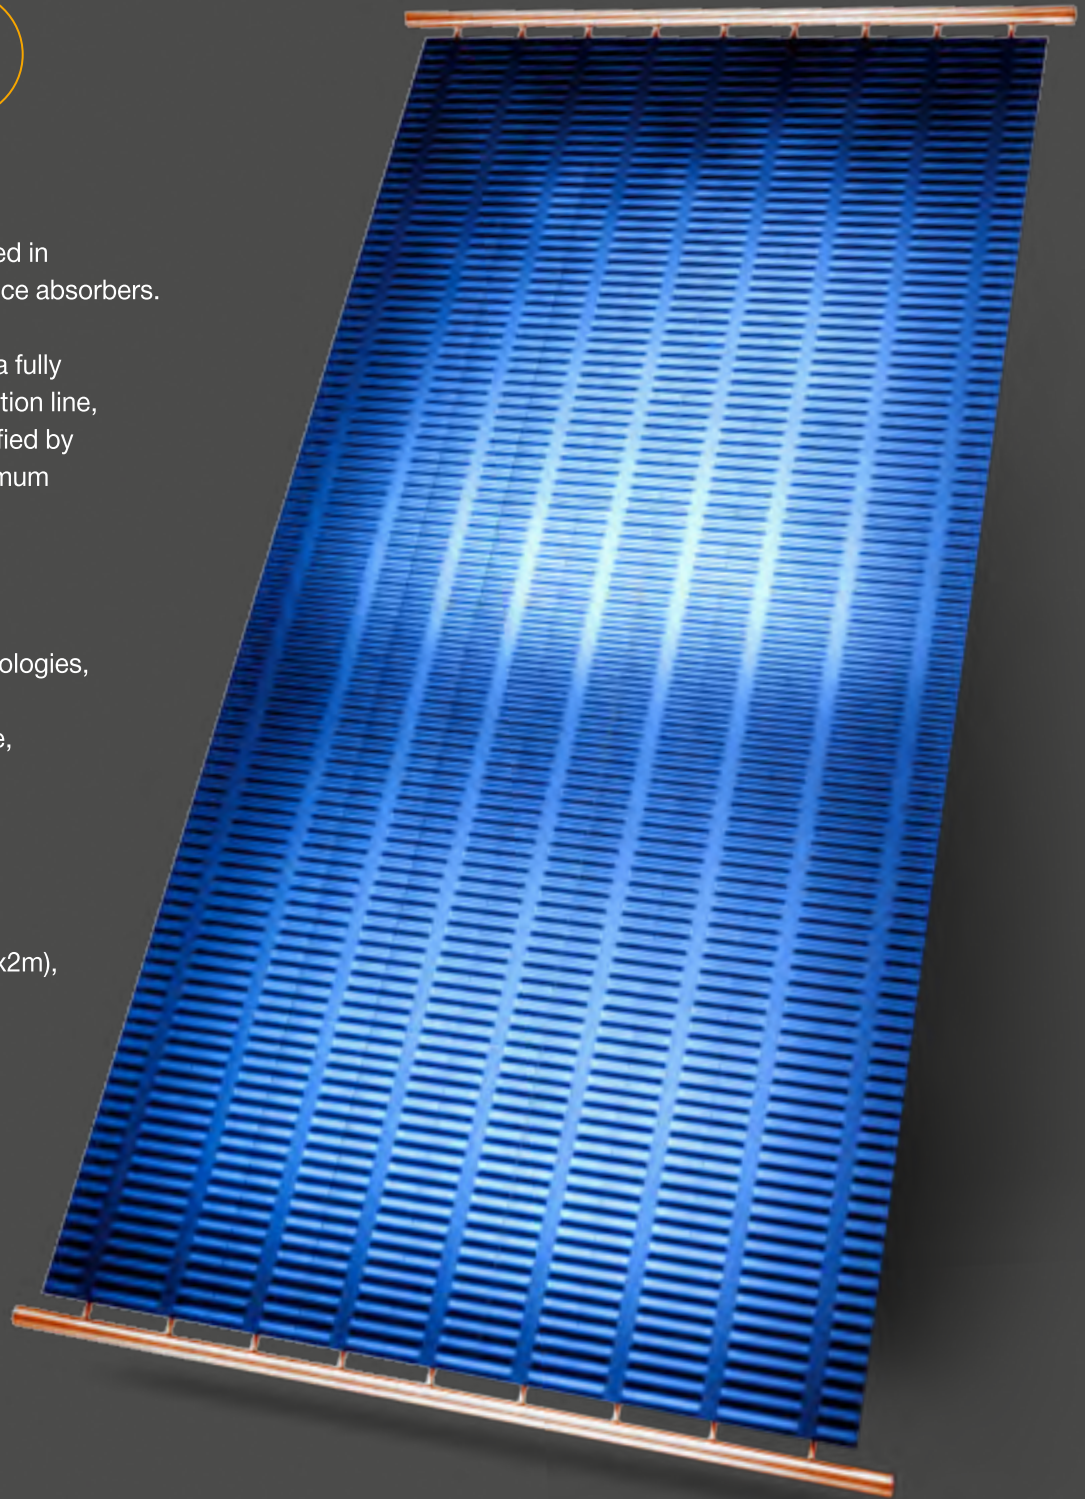

DIMAS Company is specialized in manufacturing high performance absorbers.

With years of experience and a fully automated multi-stage production line, electronic controlled and certified by ISO 9001:2008, ensures maximum quality with zero failures in mass productions.

Equipped with **LASER** and **ULTRASONIC** welding technologies, produce aluminium or copper absorbers with fins or full plate, using selective materials made in Germany with high quality PVD coating technology, black selective or black paint on a huge range of sizes up to 12m² (6mx2m), in any combination the above materials.

Additionally we can add the following details on the absorbers

- Brass Connectors of any kind
- With Return tubes
- With middle diaphragm for forced circulation
- With 2 exits
- Diagonal
- With 4 exits

Packing services

Our products are travelling around the world since they packed with international transport and insurance standards.

- Euro Pallet Wooden box
- Internal protection bumpers
- Protection film
